Abkürzungen

KA: schriftliche Klausur / written exam
MP: mündliche Prüfung / oral examination
AP: alternative Prüfungsleistung / alternative examination
PVL: Prüfungsvorleistung / prerequisite
MP/KA: mündliche oder schriftliche Prüfungsleistung (abhängig von Teilnehmerzahl) / written or oral examination (dependent on number of students)

SS, SoSe: Sommersemester / sommer semester
WS, WiSe: Wintersemester / winter semester

SX: Lehrveranstaltung in Semester X des Moduls / lecture in module semester x

SWS: Semesterwochenstunden

Data:	AHTEM MA Nr. 3708 / Examination number: 52601	Version: 09.12.2021	Start Year: SoSe 2022
Module Name:	**Analysis of High Temperature Processes in Extractive Metallurgy**		
(English):			
Responsible:	Charitos, Alexandros / Prof.		
Lecturer(s):	Charitos, Alexandros / Prof.		
Institute(s):	Institute for Nonferrous Metallurgy and Purest Materials		
Duration:	1 Semester(s)		
Competencies:	The goal of the module is to train the students in the analysis of high temperature processes from a process engineering perspective. After successful completion of the course, the students will be in a position to analyze aformentioned processes with regard to (i) thermodynamics (ii) fluid-dynamics (iii) link the above with unit operations and their mass and heat balances (iv) be able to conduct a short literature research and present results (v) understand troubleshooting methodology associated to these processes.		
Contents:	The lecture is divided to sub-modules: (i) **Brief thermodynamics recap** to aid understanding for the rest of the modules (ii) **Gas-solid reaction processes:** Roasting and calcination – a description of unit operations, Themodynamics – Construction of Kelogg predominance diagrams, Discussion on fluidized bed fluid dynamics, Mass and heat balances (iii) **Reduction processes:** Analysis of ferroalloy production processes with focus on silicon/ ferrosilicon is included amongst other examples, Discussion on the Pidgeon process for the production of magnesium (iv) **Oxidative smelting processes:** The extractive metallurgy of copper / matte smelting fundamentals / bath and flash smelters (mass and heat balances) / P-S converters / fire refining – casting and brief description in electrorefining (v) **Electrolysis in molten salt baths:** Introduction to the Hall Heroult process for aluminium production (vi) **Recycling processes:** Introduction to Li-ion battery and electronic waste recycling processes.

Types of Teaching:	S1 (SS): Lectures (4 SWS) S1 (SS): Presentation of the assignment / Seminar (1 SWS)		
Pre-requisites:	**Recommendations:** Revision of courses associated to metallurgical thermodynamics		
Frequency:	yearly in the summer semester		
Requirements for Credit Points:	For the award of credit points it is necessary to pass the module exam. The module exam contains: PVL: Assignment KA [180 min] There is the possibility of obtaining additional points for the written examination through the assignment. PVL have to be satisfied before the examination.		
	Voraussetzung für die Vergabe von Leistungspunkten ist das Bestehen der Modulprüfung. Die Modulprüfung umfasst: PVL: Schriftliche Ausarbeitung KA [180 min]		

	Es besteht die Möglichkeit, durch die schriftliche Ausarbeitung Zusatzpunkte für die Klausur zu erzielen. PVL müssen vor Prüfungsantritt erfüllt sein bzw. nachgewiesen werden.
Credit Points:	7
Grade:	The Grade is generated from the examination result(s) with the following weights (w): KA [w: 1]
Workload:	The workload is 210h. It is the result of 75h attendance and 135h self-studies.

Data:	BCT. MA. Nr. 3689 / Examination number: 51002	Version: 11.11.2019	Start Year: SoSe 2020
Module Name:	**Basics of Coatings Technology**		
(English):			
Responsible:	Rafaja, David / Prof. Dr. rer. nat. habil.		
Lecturer(s):	Wüstefeld, Christina / Dr.-Ing.		
Institute(s):	Institute of Materials Science		
Duration:	1 Semester(s)		
Competencies:	The student understands the fundamentals of various procedures for deposition of thin and thick layers and is able to assess the consequences of the applied procedures on the properties of the layers.		
Contents:	Physical vapour deposition, chemical vapour deposition, layer formation, layer materials, electroplating, thermal spraying, hot dip coating, mechanical plating, characterization of thin films and layers.		
Literature:	M. Ohring: Materials science of thin films, Academic Press, Elsevier, San Diego, 2003; D. M. Types of Teaching:	S1 (SS): Lectures (3 SWS)		
Pre-requisites:			
Frequency:	yearly in the summer semester		
Requirements for Credit Points:	For the award of credit points it is necessary to pass the module exam. The module exam contains: KA [90 min]		
	Voraussetzung für die Vergabe von Leistungspunkten ist das Bestehen der Modulprüfung. Die Modulprüfung umfasst: KA [90 min]		
Credit Points:	4		
Grade:	The Grade is generated from the examination result(s) with the following weights (w): KA [w: 1]		
Workload:	The workload is 120h. It is the result of 45h attendance and 75h self-studies.		

Data:	CPTA MA Nr. 3658 / Examination number: 44509	Version: 16.02.2022	Start Year: SoSe 2019
Module Name:	**Crystal Plasticity, Texture and Anisotropy**		
(English):	Crystal Plasticity, Texture and Anisotropy		
Responsible:	Eidel, Bernhard / Prof. Dr.-Ing. habil.		
Lecturer(s):	Prakash, Aruna / Dr.-Ing. Eidel, Bernhard / Prof. Dr.-Ing. habil.		
Institute(s):	Institute of Mechanics and Fluid Dynamics		
Duration:	1 Semester(s)		
Competencies:	Students will be exposed to the materials scientific fundamentals of plasticity in single and polycrystals. They will learn mathematical and conceptual concepts concerning orientation distributions, texture and anisotropy and will be able to apply this knowledge for understanding material properties. They will learn about experimental methods for synthesis of polycrystalline materials, for testing and characterization. Students will be introduced to different types of representing the particular deformation behaviour in polycrystalline materials, i.e., mean field and full field approaches. They will be able to understand positive and negative aspects of these models and can transfer their knowlege to new models. An other emphasis is on fundamental concepts of grain boundaries together with approaches towards modeling them. The students will get acquainted with various tools for data analysis and simulations and will be able to apply them to new problems.		
Contents:	• Mathematical concepts of orientation distributions, description and characterization of grain distributions • Texture: Definition, typical textures • Experimental methods for synthesis, testing and characterization • Basics of most commonly used crystal plasticity models • Grain boundaries, 5-parameter description, experimental and modeling aspects The above topics will be extended in the hands-on tutorial/exercise/programming sessions, where the emphasis will be on applying the methods learnt in the lecture.

Types of Teaching:	S1 (SS): Lectures (2 SWS) S1 (SS): Exercises (1 SWS)		
Pre-requisites:	**Recommendations:** Mechanics of Materials, 2022-02-16 Minimum requirements are scientific programming skills (as, e.g., aqcuired during "Software Tools for Computational Materials Scientists 1") and a basic understanding of plasticity (as, e.g., aqcuired from "Fundamentals of Microstructures").		
Frequency:	yearly in the summer semester		
Requirements for Credit	For the award of credit points it is necessary to pass the module exam.		

Points:	The module exam contains: PVL: Calculation and simulation MP/KA (KA if 6 students or more) [MP minimum 30 min / KA 90 min] PVL have to be satisfied before the examination.
	Voraussetzung für die Vergabe von Leistungspunkten ist das Bestehen der Modulprüfung. Die Modulprüfung umfasst: PVL: Berechnungen und Simulation MP/KA (KA bei 6 und mehr Teilnehmern) [MP mindestens 30 min / KA 90 min] PVL müssen vor Prüfungsantritt erfüllt sein bzw. nachgewiesen werden.
Credit Points:	4
Grade:	The Grade is generated from the examination result(s) with the following weights (w): MP/KA [w: 1]

Lecturer(s):	Scharf, Christiane / Prof. Dr.-Ing.		
Institute(s):	Institute for Nonferrous Metallurgy and Purest Materials		
Duration:	1 Semester(s)		
Competencies:	Students are able to assess the possibilities and technical aspects of the unit operations covered and their potential for the recycling of high-tech metals. To do this, they can apply the thermodynamic data and calculations to develop new processes. Students can combine the technological sub-areas and thus develop new ways for recycling processes.		
Contents:	Overview of strategic metals, their properties, raw materials, use and production. Thermodynamic data of oxides, sulphides, chlorides, and fluorides. Scheme of metal production. Unit Operations of ultrapure metal production. Extraction and recycling in particular of the metals germanium, gallium, indium, lanthanides and actinides. Enrichment in the material flows of metallurgy of the main metals copper, zinc, lead and aluminum. Extraction of the strategic metals from the enriched intermediates by pyro- and hydrometallurgical processes. Processing into ultrapure metals by metallurgical refining processes.

Verantwortlich(e):	Polanski, Katja		
Dozent(en):			
Institut(e):	Internationales Universitätszentrum/ Sprachen		
Dauer:	1 Semester		
Qualifikationsziele / Kompetenzen:	Die Teilnehmer machen sich mit wesentlichen sprachlichen Merkmalen und typischen Strukturen von mündlichen und schriftlichen Fachtexten vertraut. Sie erwerben Strategien zum Hörverstehen, Leseverstehen, akademischen Schreiben und Präsentieren, können diese bei der eigenen Textrezeption und Textproduktion anwenden, um die mit dem Studium verbundenen sprachlich-kommunikativen Aufgaben zu bewältigen.		
Inhalte:	• Definieren, Klassifizieren • Prozessbeschreibung • Zusammenfassung und Analyse • Präsentieren und Visualisieren • Sprachliche Strukturen • Grundlagen und Grundbegriffe anhand des fachlichen Profils der TU Bergakademie Freiberg; z.B. der Materialwissenschaften, Maschinenbau, Verfahrens- und Energietechnik		
Typische Fachliteratur:	Internes Lehrmaterial		
Lehrformen:	S1 (WS): Übung (4 SWS)		
Voraussetzungen für die Teilnahme:	**Obligatorisch:** Sprachniveau C1, z.B. DSH-2 oder äquivalente Sprachkenntnisse, in Ausnahmefällen Sprachniveau B2		
Turnus:	jedes Semester		
Voraussetzungen für die Vergabe von Leistungspunkten:	Voraussetzung für die Vergabe von Leistungspunkten ist das Bestehen der Modulprüfung. Die Modulprüfung umfasst: AP: Portfolioprüfung bestehend aus 4 Teilen AP: Aufgaben und aktive Teilnahme an mind. 80% d. Lehrveranstaltungen		
Leistungspunkte:	4		
Note:	Die Note ergibt sich entsprechend der Gewichtung (w) aus folgenden(r) Prüfungsleistung(en): AP: Portfolioprüfung bestehend aus 4 Teilen [w: 1]		
Arbeitsaufwand:	Der Zeitaufwand beträgt 120h und setzt sich zusammen aus 60h Präsenzzeit und 60h Selbststudium. Letzteres umfasst die Vor- und Nachbereitung von Lehrveranstaltungen sowie die Vorbereitung der Aufgaben und der Prüfungsleistung.

Responsible:	Wiens, Marcus / Prof. Dr.		
Lecturer(s):	Wiens, Marcus / Prof. Dr.		
Institute(s):	Professor of Innovation and Risk Management		
Duration:	1 Semester(s)		
Competencies:	After successful completion of the module, students should be able to explain the drivers and dynamics of innovation and to determine the value of innovation-driven investments. Students should be able to model innovation processes based on extreme value theory and learning theories. Furthermore, they shold be able to apply behavioral and game-theoretic approaches explaining incentives for cooperative research & development, innovation networks, patent-races and contracting.		
Contents:	The module starts with a systematic overview of invention and innovation, providing basic economic knowledge about the sources, drivers and barriers for innovation. Selected practical examples and case studies shed light on particularly innovative industries. The module covers behavioral and strategic implications of innovation-oriented investments and analyses in depth issues like learning strategies, strategic cooperation and innovation networks and tournaments. Finally, the module derives conclusions for efficient innovation policies, from both a business and public perspective.

(English):			
Responsible:	Charitos, Alexandros / Prof.		
Lecturer(s):	Charitos, Alexandros / Prof.		
Institute(s):	Institute for Nonferrous Metallurgy and Purest Materials		
Duration:	1 Semester(s)		
Competencies:	Students will be introduced to fundamentals and applications within all areas of nonferrous metallurgy, i.e., pyrometallurgy, hydrometallurgy and electrometallurgy. Hence, the role of thermodynamics will be clearly explained and linked to unit operations pertinent to non-ferrous metallurgy. The course aims to provide a first impression with regard to nonferrous metallurgical processes, principles and associated unit operations, while providing a basis for further study of the above topics within further subjects. Students will be able to understand the fundamentals and applications within all areas of nonferrous metallurgy and to apply basic aspects.		
Contents:	An overview of thermodynamics will be presented focusing on Ellingham-, binary and ternary phase diagram use in the context of pyrometallurgical processing. Smelting and refining aggregates and their operation will be presented. A brief introduction to hydrometallurgy includes the use of Pourbaix E-ph diagrams, explanation of leaching types and the principles of operation of further units such as ion exchange, solvent extraction and precipitation among others. Electrometallurgical principles will be presented (e.g. the role of the electrochemical series) in the context of both electrorefining and electrowinning, while distinguishing between aqueous and molten salt electrolysis.

(English):			
Responsible:	Prahl, Ulrich / Prof. Dr.-Ing.		
Lecturer(s):	Prahl, Ulrich / Prof. Dr.-Ing.		
Institute(s):	Institute of Metal Forming		
Duration:	1 Semester(s)		
Competencies:	Students understand the complex relationships between the material and process-related influences on the forming behaviour. Furthermore students are enabled to understand and evaluate the behaviour of relevant metallic materials in industrial manufacturing processes of forming technology. The forming behaviour of different metallic materials (e.g. iron/steel, magnesium, titanium, aluminium, nickel, shape memory alloys, etc.) is estimated on the basis of information on the chemical composition, manufacturing route and material condition. On the basis of the various semi-finished product production routes, the forming capacity of the individual materials is assessed with the aid of the metal physical properties relevant to forming. The extraction, further processing and application examples are discussed in an overview.		
Contents:	The main parameters influencing the forming behaviour of metallic materials are presented. State diagrams of binary and ternary alloys are presented for iron and common non-ferrous metals individually or in combination of alloying and accompanying elements. The information to be derived from them about the phase composition at different temperatures is explained and related to the forming behaviour depending on the forming conditions. Examples of flow curves and the forming capacity for selected materials and their different states underpin these relationships. Finally, the knowledge is brought into connection with cold and hot forming processes and the resulting requirements regarding the forming behaviour of the input materials or materials used. In seminars and practical courses, the knowledge is deepened and basic skills for determining material parameters relevant to forming are also taught.

Duration:	2 Semester(s)		
Competencies:	The student is able to relate problems from engineering practice to fundamental concepts from Materials Science. Further the student is able to relate technological aspects of processing of metallic materials to changes in microstructure, the mechanical parameters and further properties.		
Contents:	The first part of the lectures deals with the basics of materials science (structure, classes of materials), the main properties and the application of materials. The second part of the lecture deals with the (micro-)structure - properties relations of metallic materials. Focus is given to plastic deformation and failure, particularly to following metal alloy types: • Ferrous metals (plain carbon steels, high-alloyed steels, cast irons); • Non-ferrous metals (e.g. copper, nickel) • Light metals (aluminum, titanium, magnesium) • High-temperature alloys (superalloys, intermetallic alloys)

Duration:	1 Semester(s)		
Competencies:	The students get to know various simulation tools from the field of foundry engineering. They will be able to apply the tools accordingly in order to optimise the production process and improve the casting quality. Students will get familiar with: a physical and mathematical description of foundry processes; basics of numerical methods; micro and macro modeling of the solidification process of casting alloys; CFD approach in foundry engineering; review of commercial simulation systems for casting production.		
Contents:	Introduction to modeling and simulations of foundry processes; physico-mathematical description of thermal processes; modeling the liquid metal flow; uniqueness conditions; modeling of the solidification process; finite difference method (FDM) and finite element method (FEM) in the modeling of foundry processes.

Responsible:	Höck, Michael / Prof. Dr.		
Lecturer(s):	Höck, Michael / Prof. Dr.		
Institute(s):	Professor of Industrial Management, Production Management and Logistics		
Duration:	1 Semester(s)		
Competencies:	Foremost, the module aims to convey to the student problem-solving competencies with a view to putting the student in a position to analyse the complex questions in operations management, to structure them, and to develop solution alternatives.		
Contents:	This course addresses the management of operations in manufacturing and service firms. Diverse activities, such as determining the size and type of production process, purchasing the appropriate raw materials, planning and scheduling the flow of materials and the nature and content of inventories, assuring product quality, and deciding on the production hardware and how it gets used, comprise this function of the company. Managing operations well requires both strategic and tactical skills. During the term, we will consider such topics as: process analysis, workforce issues, materials management, quality and productivity, technology, and strategic planning, together with relevant analytical techniques. This course will provide a survey of these issues.

(English):			
Responsible:	Wiens, Marcus / Prof. Dr.		
Lecturer(s):	Wiens, Marcus / Prof. Dr.		
Institute(s):	Professor of Innovation and Risk Management		
Duration:	1 Semester(s)		
Competencies:	After successful completion of the module, students should be able to explain the context, rationale, strategy and tactics of project management with emphasis on the importance of project planning and project risk management by identifying and examining critical project phases and conditions. The course enables the participants to apply project management skills to projects in a variety of industries and disciplines with a strong focus on the complexities and problem constellations of mega projects, but also information technology, procurement & maintenance projects. By focussing on providing knowledge in core areas of risk analysis, time, cost and quality, the participants are able to confidently deal with the ever growing complexities and challenges of project management.		
Contents:	The module starts with a systematic overview of the principles of project management. The module covers the areas of project scope management, time management and resource scheduling as well as cost & quality management primarily from a risk-oriented perspective. The module applies methods such as model-based and statistical risk analysis, decision-theoretic analyses, Monte-Carlo-simulations as well as behavioral and game-theoretic approaches to understand incentives, decision biases and public acceptance. Finally, the module derives conclusions for efficient risk management policies for complex projects.

Lecturer(s):	Prakash, Aruna / Dr.-Ing. Eidel, Bernhard / Prof. Dr.-Ing. habil.		
Institute(s):	Institute of Mechanics and Fluid Dynamics		
Duration:	2 Semester(s)		
Competencies:	The students will be able to interact with their computer using a Unix shell. This includes monitoring their system resources, interacting with the file system, and setting up their work environment to their needs. Participants will know how to use a high-level general-purpose programming language and the fundamentals of software engineering within the scientific ecosystem of that language. This comprises basic design patterns, object-oriented programming, an introduction to modern file formats, efficient data serialization, data visualization, interfacing to other programs, and automated testing. The participants will be able to use modern version control systems for working in a collaborative fashion.		
Contents:	These courses will cover the software tools used within computational materials science. The Unix shell will be introduced as a mean to interact with the computer to promote automation of repetitive tasks and working on remote systems, both for monitoring and file system interaction purposes. Libraries and packages from the scientific community will be utilized to pre- and postprocess data for third-party simulation software and to write simulations from the ground up. The underlying data structures that enable a high-level language to be efficient enough for large-scale simulations will be introduced. Techniques for collaboration with other software contributors in form of modern version control systems in conjunction with repository hosting will be outlined.

Responsible:	Höck, Michael / Prof. Dr.		
Lecturer(s):	Höck, Michael / Prof. Dr.		
Institute(s):	Professor of Industrial Management, Production Management and Logistics		
Duration:	1 Semester(s)		
Competencies:	In this course students will view the supply chain from the point of view of a general manager. Logistics and supply chain management is all about managing the hand-offs in a supply chain - hand-offs of either information or product. The design of a logistics system is critically linked to the objectives of the supply chain. Our goal in this course is to understand how logistical decisions impact the performance of the firm as well as the entire supply chain. The key will be to understand the link between supply chain structures and logistical capabilities in a firm or supply chain.		
Contents:	Supply Chain Management (SCM) deals with the planning, implementing and controlling of efficient flow and storage of raw materials, in-process inventory, finished goods, and related information from point of origin to point of consumption. Issues discussed in the course will include the total logistics cost approach, supply chain network design and optimizing the overall performance. Effective logistics systems aim towards coordination of transportation, inventory positioning and supply contracts to provide quick service efficiently.

(English):			
Responsible:	Prahl, Ulrich / Prof. Dr.-Ing.		
Lecturer(s):	Ullmann, Madlen / Dr.-Ing. Prahl, Ulrich / Prof. Dr.-Ing.		
Institute(s):	Institute of Metal Forming		
Duration:	1 Semester(s)		
Competencies:	Profund transfer of knowledge for a material-specific development of technologies for the production of flat products as well as the ability to sketch the necessary plant concepts. That knowledge allows to choose the most economical way of production with the highest quality of the product. Students will be able to understand and to control qualitatively industrial technologies for the production of metallic flat products.		
Contents:	After a short repetition of technological methods, flat products will be specified according to their condition of delivery and application. Additionally, necessary manufacturing equipment will be introduced. Several plant components will be presented in terms of their ability to alter material properties. Material-specific knowledge for processes such as heating, hot forming (hardening and softening, precipitation and transformation behavior, microstructure), cooling, cold forming and heat treatment will be expanded to flat product specific contents.		
Literature:	Béranger: The Book of Steel, Lavoisier Publishing Inc. 1996		
Types of Teaching:	S1 (SS): Lectures (3 SWS) S1 (SS): Exercises (1 SWS)		
Pre-requisites:	**Recommendations:** Fundamentals of Metal Forming		
Frequency:	yearly in the summer semester		
Requirements for Credit Points:	For the award of credit points it is necessary to pass the module exam. The module exam contains: MP/KA (KA if 6 students or more) [MP minimum 30 min / KA 90 min]		
	Voraussetzung für die Vergabe von Leistungspunkten ist das Bestehen der Modulprüfung. Die Modulprüfung umfasst: MP/KA (KA bei 6 und mehr Teilnehmern) [MP mindestens 30 min / KA 90 min]		
Credit Points:	6		
Grade:	The Grade is generated from the examination result(s) with the following weights (w): MP/KA [w: 1]		
Workload:	The workload is 180h. It is the result of 60h attendance and 120h self-studies.

Module Name:	**Technology of Iron and Steel**		
(English):			
Responsible:	Volkova, Olena / Prof. Dr.-Ing.		
Lecturer(s):	Gutte, Heiner / Dr.		
Institute(s):	Institute of Iron and Steel Technology		
Duration:	1 Semester(s)		
Competencies:	Upon successful completion of the module, the students will have ready-to-use knowledge of the crude iron production, alternative technologies of iron- and steelmaking, and the chemical reactions involved. This knowledge enables the students to independently evaluate and solve application-oriented engineering problems.		
Contents:	Ironmaking, Ore Preparation, Coke, Blast Furnace Process, Blast Furnace Reactions, Injectants, Behavior of Minor Elements and Impurities, Formation of Hot Metal and Slag, Energy and Materials Balance of Blast Furnace, DRI Processes, Smelting Reduction Processes, New Developments of Ironmaking Technologies, Hot Metal Pretreatment, Converter Steelmaking, Process Phenomena in Converter Steelmaking, Slag Formation, Postcombustion, Reactions in Converter Process, Energy and Materials Balance of Converter Process, Electric Furnace Steelmaking, AC and DC Furnaces, Electrodes, Foaming Slag, Energy and Materials Balance of EAF Process, Special Furnace Constructions, Hybrid Process for Steelmaking of Scrap and Hot Metal, Secondary Steelmaking, Continuous Casting of Steel

Module Name:	**Technology of Long Products**		
(English):			
Responsible:	Prahl, Ulrich / Prof. Dr.-Ing.		
Lecturer(s):	Ullmann, Madlen / Dr.-Ing. Prahl, Ulrich / Prof. Dr.-Ing.		
Institute(s):	Institute of Metal Forming		
Duration:	1 Semester(s)		
Competencies:	Profund transfer of knowledge for the development of material-specific technologies including plant concepts for producing hot rolled long products combined with quality and economic aspects. Different methods of thermomechanical treatment, specifics of important metals and alloys as well as their further processing to semi-finished products and finished products by cold forming will be addressed. Students will be able to understand and to control qualitatively industrial technologies for the production of metallic long products.		
Contents:	The components of a technological process chain will be demonstrated and their subject matter will be discussed. This includes material-specific knowledge (forming behavior, hardening and softening kinetics, phase transformation, precipitation, microstructure development at room temperature and the mechanical properties), quality characteristics of the products to be produced according to applicable standards and the plant design. The different methods of thermomechanical treatment will be covered for rolling of rods, wire and profiles. The necessary requirements on plant technology and the function of several units with its technical data will be discussed. This is followed by teaching product manufacturing methods from cast ingot to semi-finished product by hot and cold forming for selected metals and alloys.

(English):			
Responsible:	Prahl, Ulrich / Prof. Dr.-Ing.		
Lecturer(s):	Prahl, Ulrich / Prof. Dr.-Ing.		
Institute(s):	Institute of Metal Forming		
Duration:	1 Semester(s)		
Competencies:	Students will be able to apply basic theoretical concepts of forming technology and transfer them to industrial problems, especially: • thermodynamic and continuum mechanical description of forming processes, • creation of phenomenological models for the description of forming and temperature temperature state • corresponding models for the description of the material state and the essential boundary conditions for the forming zone.		
Contents:	After a compact introduction to the tensor notation and tensor calculation, the continuum mechanical description of the deformation state in a solid body is given for large deformations. The kinematic, kinetic and constitutive equations are derived for the 3D space. The material-specific equations focus on the plastic and elasto-plastic models. One focus is on flow conditions and hardening approaches for monotonic and cyclic loads. The basics of forming-relevant model concepts of contact mechanics and tribology are derived. The acquired knowledge is applied to typical examples from forming technology during the lectures.

(English):			
Responsible:	Volkova, Olena / Prof. Dr.-Ing.		
Lecturer(s):			
Institute(s):	Institute of Iron and Steel Technology		
Duration:	1 Semester(s)		
Competencies:	After successful completition of the module, the students are able to solve independently thermodynamic and thermochemical calculations with special software. The students are able to transfer it for solution of modelling tasks in the field of applied material technology.		
Contents:	Introduction to thermodynamic equilibrium calculation, reactions calculation, heat and mass balances, phase transformations, phase diagrams of steels and slags, introduction to software for thermochemical balance calculation (FactSage, HSC). The aim is the application of thermochemical modelling / simulation on the technical problems of steelmaking.

Responsible:	Szucki, Michał / Prof. Dr.-Ing.		
Lecturer(s):	Szucki, Michał / Prof. Dr.-Ing.		
Institute(s):	Foundry Institute		
Duration:	1 Semester(s)		
Competencies:	The students learn various methods from the field of foundry engineering in order to better understand the casting process and solidification. They will be able to apply the methods accordingly in order to be able to optimise the casting process. Students will get familiar with: Computer-aided techniques for designing casting technology; Casting life cycle simulations; Numerical approaches to production optimization; Virtual methods for casting quality control; Rapid prototyping methods		
Contents:	Introduction to virtual prototyping; mathematical optimization; overview of CAE systems used in foundry engineering; prediction of casting defects and their impact on the properties of the final product; validation of simulation results, data exchange between simulation systems; application of additive manufacturing methods in the production of castings.
